

Installing Instruction

STEP 1

Rail Mounting

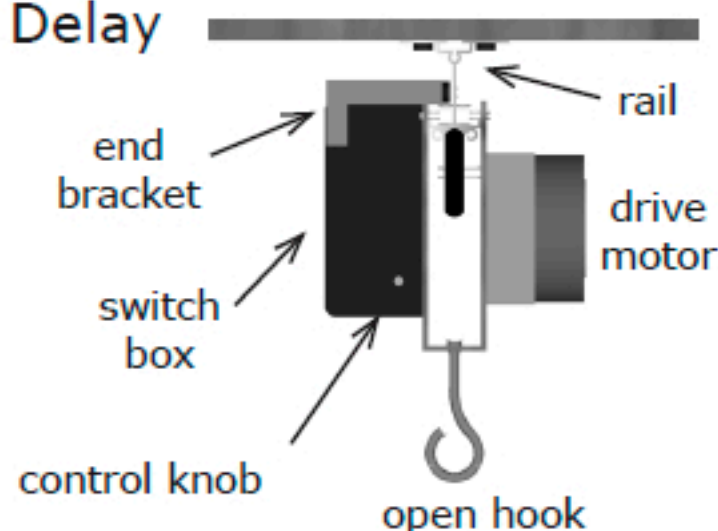

Find a flat and stable ceiling, start mounting to ceiling by screw 12 screws to your ceiling. Rail is 7ft length so find enough room to fit your space. Best space need 9x6ft.

STEP 2

Time Delay

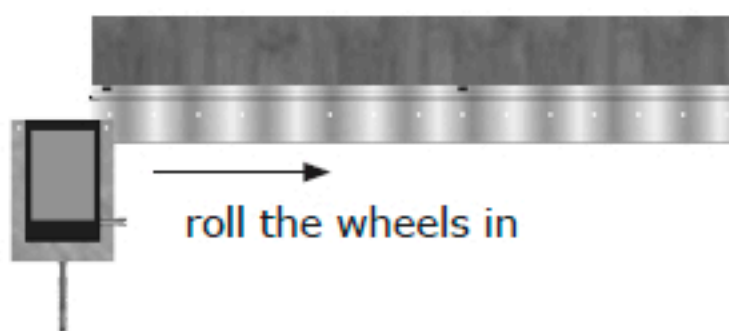

Drive motor has a time delay at each pause from 2 to 120 seconds, you can turn the knob clockwise to set delaying time.

STEP 3

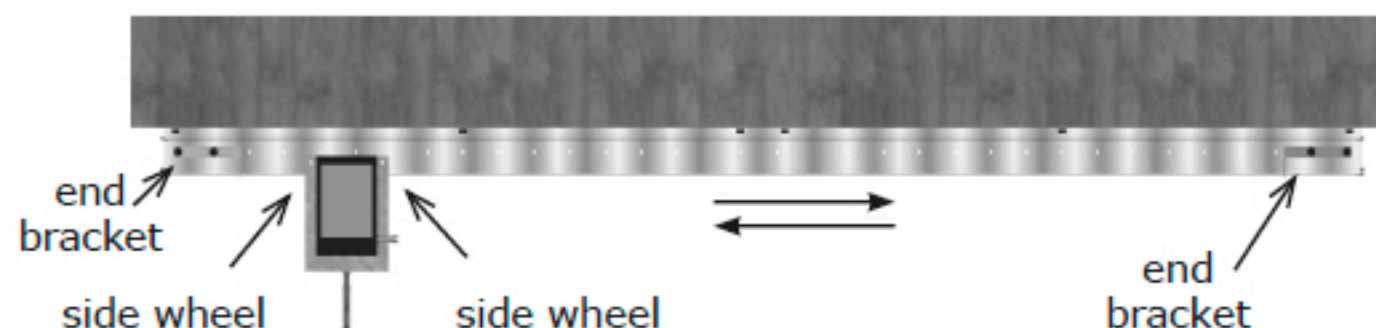

Installing Motor

At this time your rail should be finish mounted to your ceiling. Now slide the motor into the rail, make sure all four wheels are in place inside of edges.

STEP 4

How it stop

After you finish installed motor, screw in the other end bracket. Plug it in to start, drive motor will start moving. When it moved to the end, the side wheel will touch the "end bracket" then it pause for whatever time you configure earlier and then it continues moving other direction.

STEP 5

How to hang

At the bottom of the drive motor there is a open hook there, hook your light reflector to it by using a chain or a rough string. If you want it to turn on by certain time use a timer before the power plug. Maximum weight support: 10kg.
